

Jab

Evaporator and Plastic Cleaner - Dilution 1:5

JAB is a useful cleaner for evaporator. It is furthermore extremely efficient and rapid towards all the materials the a/c system evaporator components are made of.

Proposed in a concentrated solution, **JAB** is to be melted considering the dirt level, in order to better eliminate organic remains, dust and mould.

JAB is a safe product and does not leave residues that can be dangerous for the environment. Furthermore it is suitable for the cleaning of evaporators, even when these are located in dietary contexts (the product was designed for the HACCP manual).

Instructions: melt **JAB** with water (1:5 is the ideal dilution for a medium level of dirt), spray directly on the surface to be cleaned, wait 5 minutes, rinse and dry with a soft fabric.

For an ideal cleaning process, repeat once a month.

Whether a particular cleaning level is needed, repeat the operation even daily or weekly.

JAB does not ruin materials.
